Er for Blackberry   ZGroup Mobile

Blackberry ER is an application to recuperate the Blackberry devices if it is taken dishonestly or stolen .When the Blackberry device is lost it is easy to find again as the SIM swap in Blackberry ER will send new IMSI and phone numbers to the specified mobile phone and it also conveys the locality of mobile phones by means of GPS facility through SIM or GSM chip which gives sufficient data to file a case and also helps police to recover the mobile phone. If Blackberry has vital information then Blackberry ER provides more data to one and all and it is easy to recover the device. If the hoods feel to resell the device they might rub it before placing a new SIM then Blackberry ER will be ineffective.

FileVaultv100   ZGroup Mobile
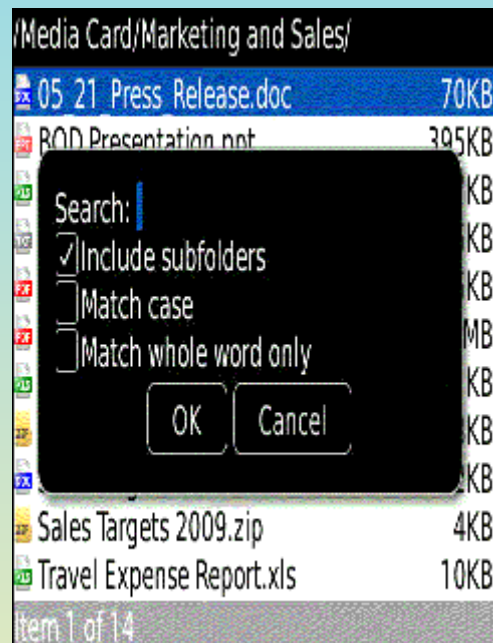

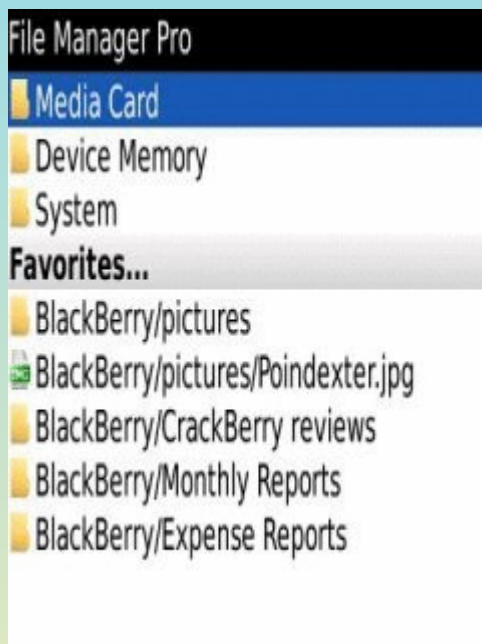

FileVault is a password protected, secure, encrypted location on your BlackBerry Smartphone to store your most sensitive data. All files and filenames stored in FileVault are encrypted for maximum security. These files become accessible only after entering your password and viewing them directly with in the FileVault application. If your phone is lost or stolen, the data will not be accessible to anybody else, even if it is plugged in to a USB cable, and browsed on a computer. Current solutions suffer from a huge security issue in that anyone with access to the phone can navigate through the file system to access your "protected" files. FileVault does not suffer from this vulnerability since it encrypts all files and filenames that get put in the vault.

Flip Silent v100   ZGroup Mobile

Once activated FlipSilent™ is waiting for incoming phone calls. Once someone calls you FlipSilent is waiting for your action. Right after the phone is flipped it is set to silent. It will stay silent until you flip it back! Use FlipSilent™ in Meetings! In a meeting everyone puts its phone on the table. Every other minute someone's phone rings and he or she needs to set it to silent - you can see this when they are fiddling around to find the actual key or button. With FlipSilent a cool appearance can be made by just flipping the phone to silent. You won't get this on an iPhone! Features: Flip the phone to silent. More incoming calls will be silent too.

GPS Logger Mobile

GPSLogger is a pretty straightforward application. It records your physical movement on your BB device over time, including elevation, speed, and some additional data. GPSLogger can also direct you to a location that you either entered manually or have previously recorded. This is the "Guide me Home" function, which makes GPSLogger usable for Geocaching (please note that this is not comparable to a standard navigation application). The most important aspect of GPSLogger is that it will work 100% offline - no data will be transferred while you use it. Core Features of GPSLogger: Record your movement over time - the following values will be stored: longitude / latitude accuracy for longitude & latitude values # of satellites current altitude

Kee Pass BB 121358   ZGroup Mobile

KeePassBB is a companion to the popular KeePass Password Safe v1. KeePassBB can use both the AES and Twofish encryption algorithms just like the desktop version. You won't notice the difference between the two algorithms on the desktop but on the BlackBerry, AES will be slightly faster because of the native implementation. Also, the number of key encryption rounds can greatly affect the speed at which the decryption process happens. 600,000 rounds on a PC will be hardly noticeable but on the device it will be unbearably slow. Requirements: · BlackBerry OS 4.2.1 or greater
